

# SPRINT 3

## APPLICATION BUILDING

### Run The App

Date	19 Nov 2022
Team ID	PNT2022TMID01315
Project Name	Classification of Arrhythmia by Using Deep Learning with 2-D ECG Spectral Image Representation

### Running the app\_flask on the local host:

The screenshot shows the PyCharm IDE with the project 'ibm' and file 'app\_flask.py' open. The code in the editor includes imports for os, numpy, Flask, load\_model, and image, followed by the initialization of a Flask app and the loading of an ECG model. The Run console at the bottom displays the execution output, which includes TensorFlow warnings and a message indicating the app is running on http://127.0.0.1:5000/.

```
1 import os
2 import numpy as np
3 from flask import Flask, request, render_template
4 from tensorflow.keras.models import load_model
5 from tensorflow.keras.preprocessing import image
6
7 app = Flask(__name__)
8 model = load_model('ECG.h5')
9
10 @app.route('/')
11 def upload():
12     if request.method == 'POST':
```

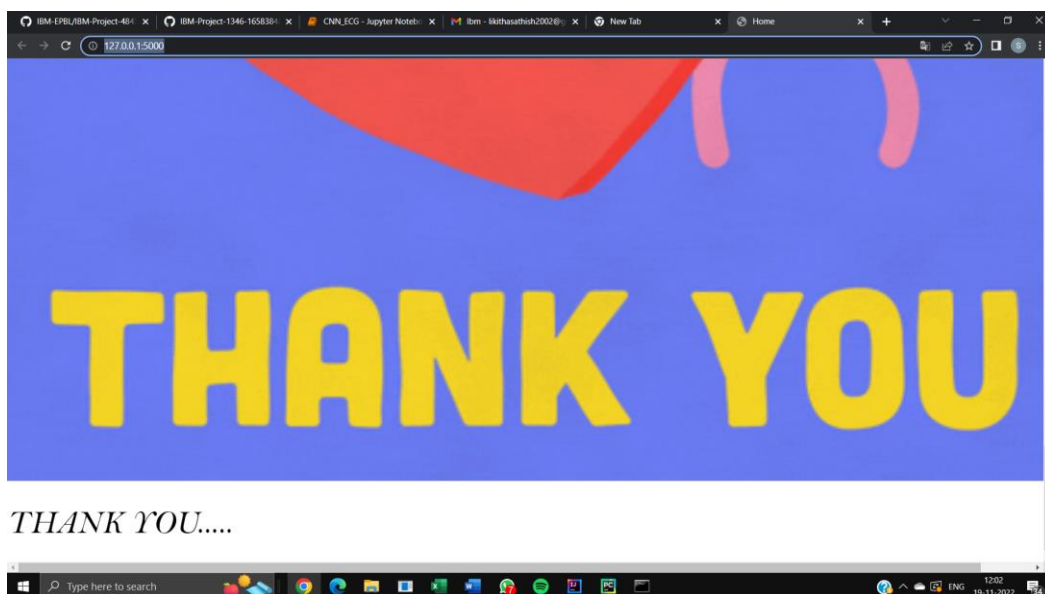

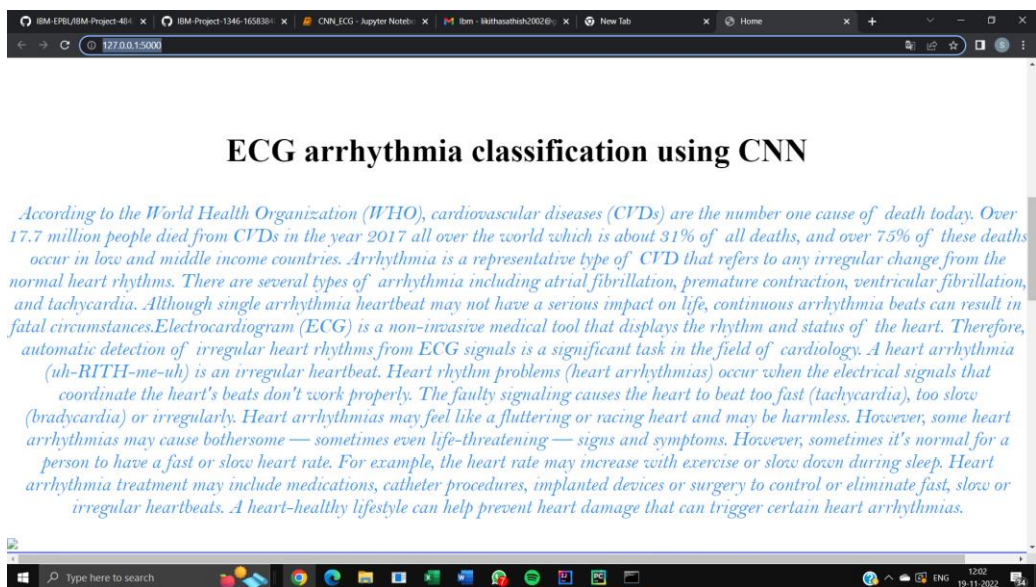

Run: app\_flask x

```

## INFO PAGE:

# VENTRICULAR FIBRILLATION

*A life-threatening heart rhythm that results in a rapid, irregular heartbeat.*

*Ventricular fibrillation (VF) is a rapid, life-threatening heart rhythm starting in the bottom chambers of the heart. It can be triggered by a heart attack.*

*Because the heart doesn't pump adequately during ventricular fibrillation, sustained VF can cause low blood pressure, loss of consciousness or death.*

*Emergency treatment includes immediate defibrillation with an automated external defibrillator (AED) and cardiopulmonary resuscitation (CPR). Long-term therapy includes implantable defibrillators and medications to prevent recurrence.*

# PREMATURE ATRIAL CONTRACTION

*Usually, premature atrial contractions have no clear cause and no health risks. In most cases, premature atrial contractions aren't a sign of heart disease and just happen naturally.*

*But some people who have PACs turn out to have related heart conditions, such as:*

- Cardiomyopathy (a weakened heart muscle)*
- Coronary heart disease (fatty deposits in your blood vessels)*

*If your doctor finds that you have a condition related to the premature heartbeats, you'll work together to make a treatment plan.*

# PREMATURE VENTRICULAR CONTRACTIONS

*Extra, abnormal heartbeats that begin in one of the heart's two lower chambers.*

*Premature ventricular contractions (PVCs) occur in most people at some point. Causes may include certain medication, alcohol, some illegal drugs, caffeine, tobacco, exercise or anxiety.*

*PVCs often cause no symptoms. When symptoms do*

*occur, they feel like a flip-flop or skipped-beat sensation in the chest.*

*Most people with isolated PVCs and an otherwise normal heart don't need treatment. PVCs occurring continuously for longer than 30 seconds is a potentially serious cardiac condition known as ventricular tachycardia.*

Compensatory pause

## RIGHT BUNDLE BRANCH BLOCK

*Right bundle branch block is associated with structural changes from stretch or ischemia to the myocardium. It can also occur iatrogenically from certain common cardiac procedures, such as right heart catheterization. Although there is no significant association with cardiovascular risk factors, the presence of a right bundle branch block is a predictor of mortality in myocardial infarction, heart failure, and certain heart blocks. In asymptomatic patients, isolated right bundle branch block typically does not need further evaluation.*

# LEFT BUNDLE BRANCH BLOCK

*A delay or blockage of electrical impulses to the left side of the heart.*

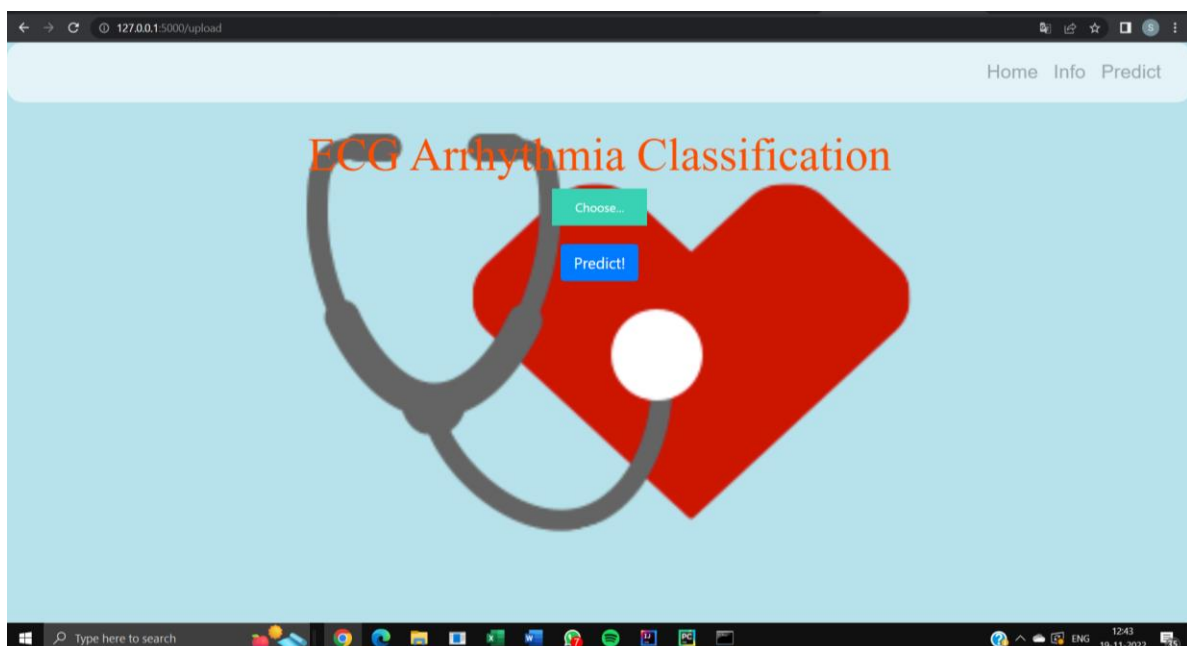

*Left bundle branch block sometimes makes it harder for the heart to pump blood efficiently through the circulatory system.*

*Most people don't have symptoms. If symptoms occur, they include fainting or a slow heart rate.*

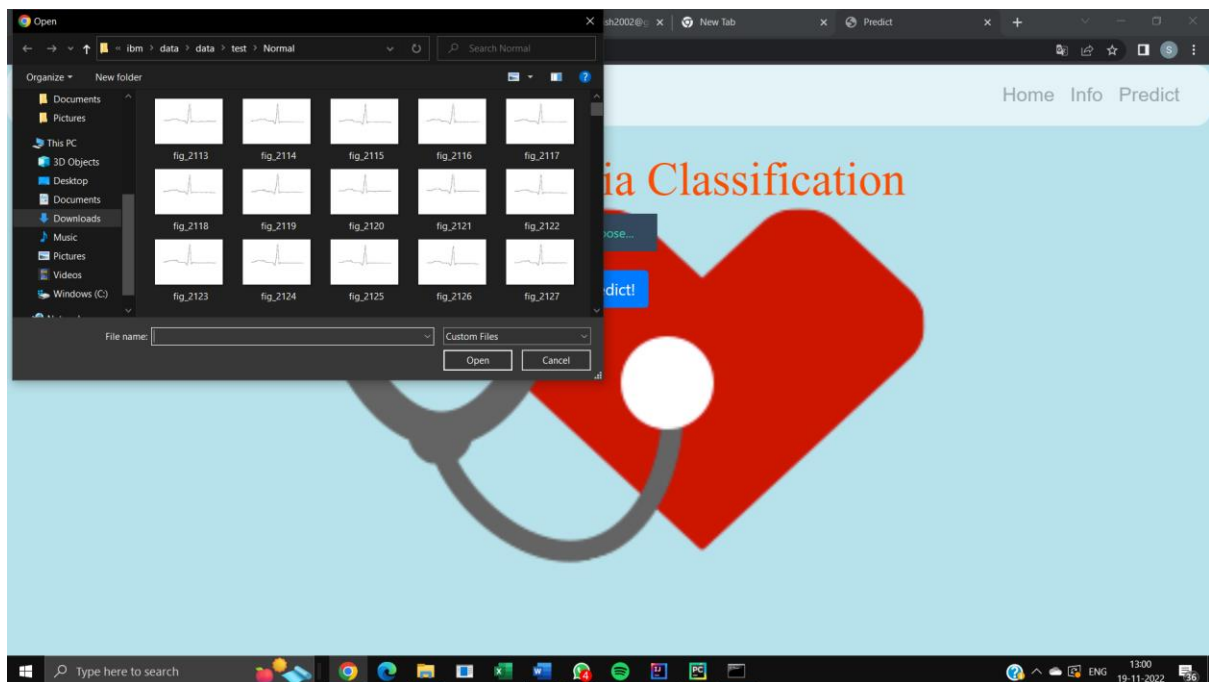

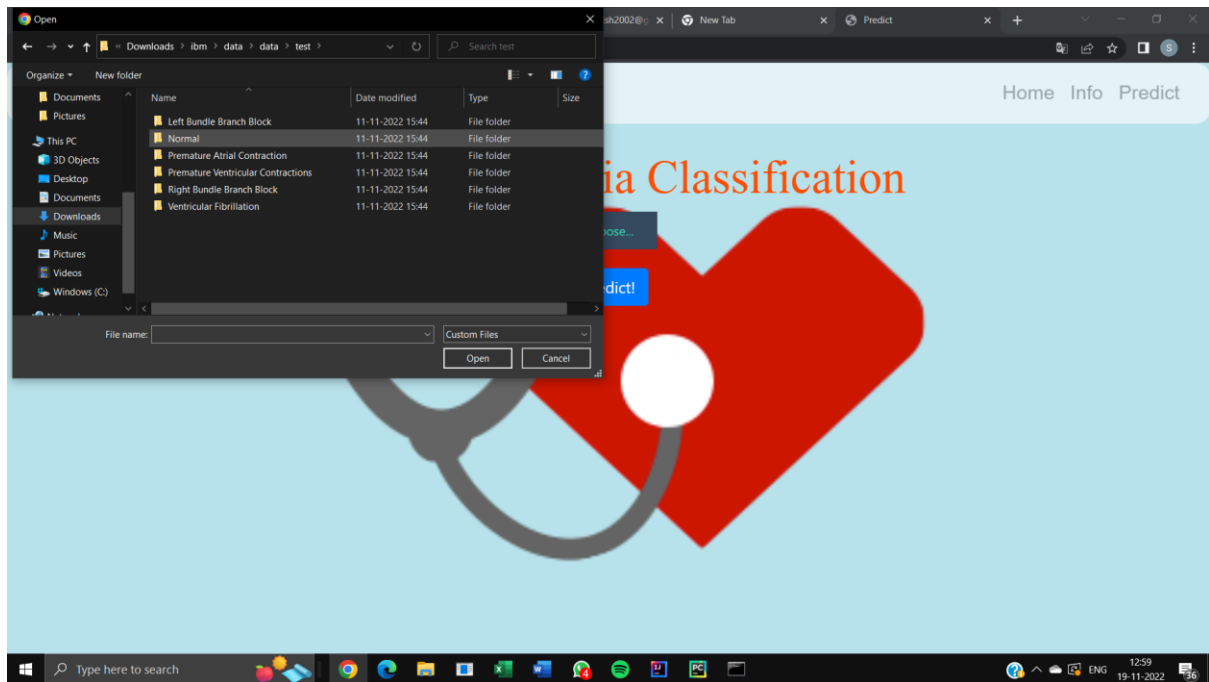

*If there's an underlying condition, such as heart disease, that condition needs treatment. In patients with heart failure, a pacemaker can also relieve symptoms as well as prevent death.*

The screenshot shows a web browser window with multiple tabs. The active tab is titled "Predict" and shows a web application interface. The address bar displays "127.0.0.1:5000/upload". The page has a light blue background with a large, faint graphic of a heart and a stethoscope. The title "ECG Arrhythmia Classification" is displayed in orange text. Below the title, there is a green "Choose..." button. A white box containing a black ECG waveform is positioned over the heart graphic. Below the waveform box, the text "Result: Ventricular Fibrillation" is displayed. The browser's taskbar at the bottom shows various application icons and the system clock indicating 19:00 on 19-11-2022.
